Task 3

Objective

The objective of this task is to optimize and to fix the provided Dockerfile, which has problems related to dependencies. In its current state, the Dockerfile that has been provided will not produce a container that can run this project. You should try to fix the Dockerfile by making sure the correct set of dependencies is installed. The task ends when you think that you have figured out the correct set of dependencies and configured the Dockerfile accordingly.

Project Description

The project consists of a small Node.js script that starts an Express server. When running the container, the expected output is "Listening on port 3000...".
